

# Release Notes EMAR 2026.5.1 and Clinical 2026.8.1

These releases deliver a MAR Report enhancement and printed evaluation improvement, plus fixes addressing medication report accuracy, printed service delivery, and a cross-application issue where discharged residents could reappear as active in eMAR.

## EMAR

### MAR Report: User Credentials and Title in the User Legend

The User Legend on the MAR Report now displays each user's credentials and title alongside their name, so the role or position of everyone represented on the report is identifiable.

**Navigation:** EMAR → Reports → Medication → Medication Administration Record | Medication Administration Record (Individual)

### What's New

- Where credentials and title exist for a user, they display after the user's name in brackets — for example, "Jane Doe (RN, Director of Care)."
- Credentials alone display as "Jane Doe (RN)." Title alone displays as "Jane Doe (Director of Care)." When both exist, credentials appear first, separated by a comma.
- When neither field is populated, the name displays exactly as it does today, with no brackets, placeholder, or extra spacing.
- Values reflect the user's credentials and title at the time the report is generated, so a role change appears on the next report ran.
- Applies to all versions of the MAR Report — Group, Individual, Online, and Offline.
- Credentials and title display only in the User Legend. No other section of the report is affected, and the existing rules determining which users appear in the legend are unchanged.
- Long names and titles follow the report's existing text wrapping behavior.

# NEXT Release Notes

## What This Means

- Surveyors and auditors reviewing a printed MAR can identify the role of each person who administered or signed for medications without cross-referencing a user list.
- Communities can distinguish between staff with similar names by role, reducing ambiguity in the medication record.

## eMAR Fixes

This release includes fixes to the medication report accuracy and order entry.

- Resolved an issue where the Medication List report did not print all of a resident's active medication orders, showing only a subset. This completes the fix delivered for the Physician Order Sheet in a prior release; both reports now print all active orders.
- Resolved an issue where medication routes were not presented in full alphabetical order when adding or editing an order, with values such as Epidural, Inhalation, Immerse, Mouth/Throat, Oral, Rebreather Mask, Subcutaneous, and Topical appearing out of sequence.

## Clinical

### Print Evaluation: Signed and Finalized Information

Printed evaluations now display who signed and finalized the evaluation, along with the date and time, giving surveyors and auditors a complete record without requiring the Activity history alongside it.

**Navigation:** Resident record → Medical → Evaluations → Evaluation → Actions → Print Complete Evaluation / Print Condensed Evaluation

|                      |                     |               |              |
|----------------------|---------------------|---------------|--------------|
| Signed Date/Time:    | 07/10/2024 05:26 PM | Signed By:    | Cassie Weber |
| Finalized Date/Time: | 07/10/2024 05:26 PM | Finalized By: | Cassie Weber |
| Page 1 of 1          |                     |               |              |

## What's New

- Two new rows appear at the bottom of the printed evaluation, above the page footer:
  - **Signed Date/Time** and **Signed By**
  - **Finalized Date/Time** and **Finalized By**
- Each pair displays the same horizontal row, using the evaluation's existing font, spacing, and alignment.
- The existing **Completed by [Person] on [Date/Time]** display at the top of the print layout is unchanged.
- Each activity shows its own user. Where one person completes an evaluation, another signs it, and a third finalizes it, all three display against their corresponding activity — the Completed By user is not reused for the signed or finalized fields.

# NEXT Release Notes

- Where signed or finalized information doesn't exist, those values remain blank rather than showing placeholder text.
- Applies to both the Complete Evaluation and Condensed Evaluation print layouts.

## What This Means

- A printed evaluation now stands on its own for surveys, audits, and medical records requests, without attaching the Activity tab to show signature and finalization detail.
- Because each activity displays its own user, the printed record accurately reflects multi-user evaluation workflows rather than implying one person performed every step.

## Discharged Residents Appearing Active in eMAR

Two separate causes allowed a resident discharged in Clinical to reappear as active in eMAR, which caused discontinued medication schedules to show as overdue and inflated the Overdue Orders dashboard. Both are resolved in this release.

## What's Fixed

- **Editable disabled date fields.** The resident unit end date field appeared disabled but still allowed users to open the date picker, change the date, and save. Changing a unit end date after discharge made the resident unit record look active or future-dated again. Disabled and read-only date fields no longer accept interaction or save changes.
- **ETL unit updates triggering admission creation.** Updating a resident's Move Out Date from Legacy synced into NEXT through the external resident-unit update endpoint, which could publish an admission-create event even though the resident was already discharged — causing eMAR to treat the resident as re-admitted. Unit updates after discharge now update resident and unit data without publishing an admission-create event or reactivating the resident in eMAR.

## What This Means

- Residents discharged in Clinical now stay discharged in eMAR, so discontinued orders no longer surface as overdue on the MAR pass or the Overdue Orders dashboard.
- Because unit end dates can no longer be edited after discharge, the resident unit record reflects the actual discharge, keeping census and medication status aligned across applications.

## Clinical Fixes

- Resolved an issue where printing Service Delivery from a resident's Services tab omitted the scheduled date; the printed document displayed only the time. The scheduled date now prints alongside the time and scheduled minutes.
